

Julio Bermúdez

SENIOR FRONTEND ENGINEER

Remote | +12678051253 | juliobermudez.dev@gmail.com | juliobermudez.dev | linkedin.com/in/julio-bermudez-dev

Summary

Senior Frontend Engineer with 4+ years of remote experience building complex, data-intensive web applications in React and TypeScript, and a background in clinical laboratory science that bridges healthcare and software. Recently built a clinical AI documentation tool with a practicing surgeon, designing medical document structures and AI safety boundaries informed by real clinical knowledge. Known for close collaboration with backend teams to shape API needs, and for measurably improving code quality; boosting test coverage from 36% to 88% and cutting data entry errors by 73% at scale.

Technical Skills

- Languages: TypeScript, JavaScript (ES6+), SQL.
- Frontend: React, Redux, Next.js, Material UI, HTML5, CSS3.
- Backend: Node.js, Express.js, PostgreSQL, Prisma, MongoDB.
- Testing & Tools: Jest, React Testing Library, Selenium, Nightwatch, Git, Linters (ESLint).

Experience

Pulpo WMS | Frontend Developer | Remote | Nov 2020–May 2024

- Engineered core features for a Warehouse Management System (WMS), identifying gaps in data validation that resulted in a 73% reduction in data entry errors.
- Spearheaded the implementation of automated testing strategies using Jest and Selenium, successfully increasing code coverage from 36% to 88%.
- Led frontend implementation of the transition from a single-tenant to multi-merchant platform, building multi-select merchant filtering across orders gated behind a per-user feature toggle for controlled rollout.
- Elevated team code quality by modeling modern JS practices for a tenured teammate and rigorously reviewing a senior engineer's PRs, catching maintainability and spec-compliance issues before release.
- Collaborated with backend teams to refactor React components, improving workflow efficiency.

Flowster | Full-stack Developer | Remote | Jun 2020 - Nov 2020

- Resolved a high volume of cross-stack bug tickets spanning React/Redux on the frontend and Express/Mongoose on the backend, maintaining platform stability across high-traffic modules.

Projects

MiloScribe — Clinical AI Documentation Assistant: React, TypeScript, Node.js, Express, Prisma, PostgreSQL, Google Gemini. Mobile-first app that turns recorded consultations into structured medical documents via multimodal AI; built with a practicing surgeon, leveraging clinical lab background for domain-correct design.
